THE CHALLENGE

- **MASSIVE GEOGRAPHIC SPLIT:** Coordinating technical production teams in Russia and Armenia, a head management in the USA, and demanding clients on-ground in the UAE and KSA.
- **HEAVY ENGINEERING DATASETS:** Processing and optimizing massive, complex architectural BIM, CAD, and Revit files without losing a single structural detail.
- **HYPER-COMPRESSED WINDOWS:** Delivering photorealistic promotional packages within rigid investor bidding deadlines, leaving zero margin for cross-border rendering delays.

THE IMPACT

- **CROSS-BORDER TEAM COLLABORATION:** Acted as the core on-ground operational link between the US executive board, Eurasian technical artists, and GCC real estate developers.
- **ON-GROUND CLIENT SUPPORT:** Separated spatial layout building from look-development pipelines, meaning on-ground client structural changes never stalled lighting or camera teams.
- **PRODUCTION TECHNICAL SUPPORT:** Provided automated tools that pre-visualized heavy 3D files for our clients, guaranteeing all assets worked together perfectly across regions without technical lag.
