PROJECT SNAPSHOT

- **CLIENT / NETWORK:** Dubai Culture & Arts Authority
- **ROLE:** Creative Manager
- **THE PITCH:** Designed a scalable suite of sensor-tracked, AI-assisted immersive spaces that brought oral histories to life, moving the institution past static museum displays.

Concept/ AI Gen

THE CHALLENGE

- **ABSTRACT IDEAS TO LOGIC:** Turning non-linear cultural themes—like community memory and continuous identity—into concrete, repeatable user-interaction logic.
- **COMPLEX ASSET CONTROL:** Tracking and cataloging hundreds of custom historical 3D assets mapped across volatile, physical public event spaces.
- **STAKEHOLDER SQUEEZE:** Bridging the gap between institutional historians (focused on strict factual accuracy) and creative and production teams.

THE IMPACT

- **HYBRID FRAMEWORK:** Ran historical asset approval through a traditional verification gate, while letting the visual interactive prototypes adapt quickly in Agile sprints.
- **AI PIPELINE BOOST:** Deployed AI-assisted asset generation workflows to drastically shorten traditional 3D modeling and texturing times.
- **AUDIENCE RETENTION:** Aiming to boost the visitor stay-time by shifting from traditional glass-case displays to responsive, immersive environments.
