# PROJECT SNAPSHOT

- **CLIENT / NETWORK:** Ministry of Media, Saudi Broadcasting Authority (SBA), Saudi One Channel.
- **ROLE:** Head of Graphics (Creative Centre - SBA)
- **THE BIG WIN:** Led the first live Extended Reality (XR) broadcast for Saudi One Channel. We got the entire technical pipeline running perfectly 48 hours ahead of schedule.

# THE CHALLENGE

- **UNTESTED STUDIO:** Launching heavy real-time software for the first time in a brand-new, unproven studio environment under live, on-air conditions
- **PIPELINE CLASH:** Forcing heavy 3D historical environments and digital crowd systems to play nicely with rigid, traditional broadcast systems without lagging
- **ABSOLUTE DEADLINE:** A high-profile national holiday broadcast with zero room for technical errors, frame drops, or delays

# THE IMPACT

- **SYSTEM DE-RISKING:** Set strict data and asset size limits to match the physical processing boundaries of the studio hardware, stopping system crashes before they could happen.
- **HOURLY GATES:** Divided the tight timeline into strict hourly milestones, focusing teams on technical stability over endless design changes.
- **PROVEN READINESS:** Delivered a flawless, continuous 2-hour simulated live rehearsal approved directly by the Vice-Minister of Media and President of the SBA.
